

Arrendale Mobile+ Smart Phone Dictation **(with Patient Search, Transcript Viewing, Edit and e-Signature)**

Arrendale Mobile+ is the smart phone app of the TA+ clinical documentation platform. Mobile+, for iPhone and Android, provides landline telephone dictation functionality plus much more: Dragon speech recognition compatibility, patient searching, transcript viewing, transcript editing and e-signature, all from your mobile phone or tablet. Providers find that Mobile+ is intuitive with familiar smart phone navigation, enhancing their productivity from any location. Utilizing TA+ software, Mobile+ optionally delivers Dragon-created transcripts to a Windows PC desktop or sends encrypted voice files to transcriptionists, accelerating turnaround times and improving patient care. Providers no longer need to carry two devices with Mobile+ eliminating the cost and hassle of a digital voice recorder while delivering greater functionality.

MOBILE+ FEATURES INCLUDE:

- ◆ Compatibility with iPhones (models 5 and higher), iPads, Android phones and Android tablets
- ◆ Real-time access to patient demographic data from host system import, typically:
 - From physician practice scheduling systems: today's, previous and future patients
 - From hospital HL7 meta data import to display associated patients
 - Provider selects patient from list and no longer needs to enter demographic data
- ◆ Patient list includes key identifiers to verify correct patient
- ◆ Dictation status indicator by patient name via radio button: Green=Complete, Orange=Incomplete
- ◆ A slide STAT button enables provider to prioritize a voice file for immediate handling
- ◆ Standard dictation functionality, similar to digital recorders:
 - Record, play back, insert, overwrite, fast forward and rewind
- ◆ Voice file 'wave' movement clearly indicates that recording activity is in process
- ◆ Mobile+ voice files are available for listening by authorized users via the central software system
- ◆ Providers may 'Save as Incomplete' when they desire to halt dictation and finish narrative later
- ◆ History screen displays lists of all uploaded Mobile+ jobs, organized by day
- ◆ Higher quality audio recordings result in improved accuracy of patient record
- ◆ Voice files are delivered via Wi-Fi or cellular data network, insuring clarity and security

MOBILE+ FUNCTIONALITY and WORKFLOW INCLUDE:

- ◆ Dictating 'Free Form' notes when no associated patient data exists
- ◆ Searching for patients by MRN, PAN, Admit Date, Patient First Name or Patient Last Name or combinations of these fields to narrow the search
- ◆ Transcript viewing, transcript editing and optional e-signature
- ◆ Returning a job to transcription QA department with a text field to specify desired edits
- ◆ Transcript creation by:
 - Your facility's transcription staff
 - A+Network Transcription Services, LLC or other outsourced transcription provider
 - For Dragon users, Dragon speech recognition via Speak-EZ+
- ◆ Listening to previously dictated Mobile+ patient voice files
- ◆ Delivery of narrative transcript into EHR via HL7

SECURITY WITH MOBILE+

- ◆ TA+ HIPAA audit logs include Mobile+ events: dictating, listening, editing, e-sign and viewing
- ◆ All communication between Mobile+ and TA+ servers is encrypted over HTTPS
- ◆ All data (voice, text files and ADT) is encrypted when resident on device and removed at logoff
- ◆ The app forces logoff after a configurable inactivity period in the event provider forgets to logoff
- ◆ Mobile+ meets password policy standards in the United States and Europe
