Dictation Efficiency for Radiology Departments
With Arrendale's Cloud Dictation and Speech-to-Text

Improve Your Workflow

- Crystal clear cloud dictation with seamless nVoq integrated speech-to-text display
- Fast, accurate speech recognition with diagnostic imaging vocabulary for all ethnicities
- Metadata integration to eliminate bar coding or dictating order and patient data
  - Patient metadata import from EHR/ RIS/ PACS
  - XML file transfer of order data from PACS
- Both voice files and text files are stored in our cloud for easy retrieval and access later
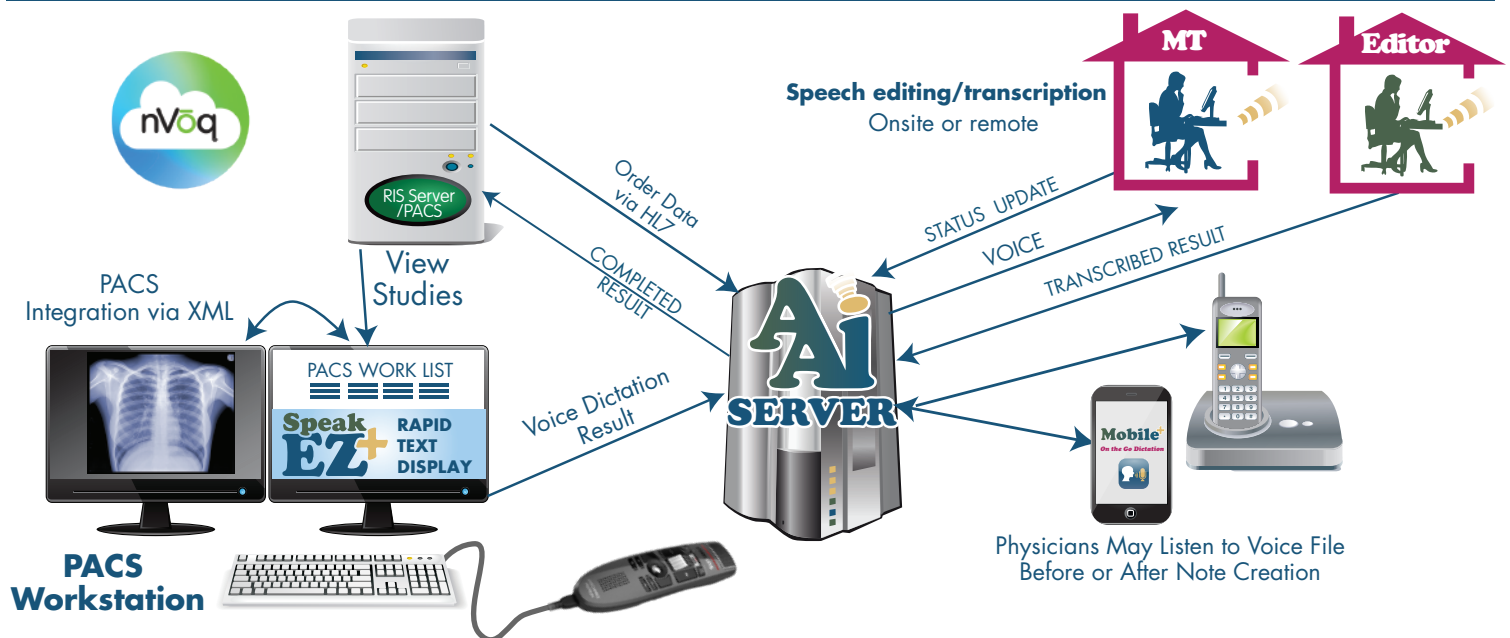

Reporting Options

- Radiologist dictates and self edits to complete each read with integrated frontend speech-to-text
- Radiologist dictates and sends to inhouse transcription staff
- Radiologist dictates and sends to compatible MTSO
- Radiologist dictates with speech enabled and either inhouse or AAI-partner MTSO edit text
- Any combination of above, as radiologist decides

Radiologist Benefits

- Single user profile works on all your devices
- Multiple users can share same workstation
- Voice or single click to insert Normals, frequently repeated text
- Voice shortcuts for formatting and navigation
- Dictate, edit and sign on a single screen
- 'Save as Incomplete' feature for interruptions
- Single read for multiple views when PACS allows
- Pull down list of local physician copy recipients
- Keyword search function displays list of reports with desired search term
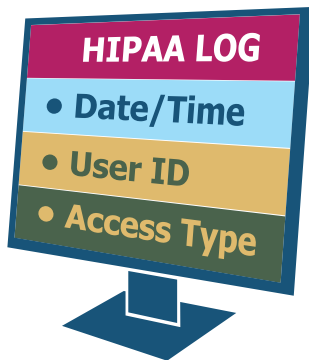

Arrendale Handles the Privacy, Security and More

HIPAA LOG
- **Date/Time**
- **User ID**
- **Access Type**

- HIPAA compliance and PHI protection:
