

Speech-Enable your EHR with Cloud-Based Ease; Dramatic Accuracy

from nVōq
SayIt™

Provider Efficiency

- Speech recognition that works in your EHR and other text programs
- Portability: Cloud enables hassle-free roaming: office, home and more
- Text appears at the cursor's location as you dictate
- Personal substitutions insert your frequently-used expressions
- Custom shortcut commands open web pages and more
- Templates that can load right into your EHR
- All medical and behavioral health vocabularies supported
- No voice training required due to newest speech advances:
 - Neural networks, artificial intelligence and deep learning technologies
- Windows and Mac compatible
- No cost mobile app to function as your mike

Relief for IT and Administration

- SayIt works with all EHRs: medical, diagnostic imaging, behavioral health and specialty EHRs
- SayIt works with a variety of microphones
- SayIt works without requiring physician office IT support
- SayIt works after a quick download, no lengthy software installation
- SayIt Admin Console streamlines setup for each user
- SayIt works with cloud and desktop EHRs, virtualized desktops and even with MS Word
- SayIt has been built specifically for healthcare with HIPAA and PHI safeguards
- SayIt is hosted in a US HIPAA compliant data center

Productivity that's off the charts!
